ZERO TRUST NETWORK PROTECTION

**Up to 90% of data breaches occur due to stolen credentials. Traditional VPNs and firewalls are not good enough. Achieve zero trust, protect the network, and bolster compliance with Timus SASE.**

**Timus SASE** is designed from the ground up for layered security into the existing **MSP** stack, streamlining operations, and reducing support tickets by up to 30%. Built by firewall experts for the Channel. Deploy in 30 minutes or less.

## ★ Hear From Our Partners

Users are happier and we have far less remote access related tickets than before. And the ones we do have, are normally a user education issue, and we have not experienced any downtime with Timus.

**Brandon Jones**

Owner, Attitude IT

"The team at Timus is awesome and is always available. It's refreshing to work with a vendor who cares and engages as much as Timus does."

**Chris Fisco**

Director of Technical Services, Krantz Secure Technologies

"The overall experience with Timus has been solid. From general support to providing feedback that has been already incorporated into the product."

**Bryan Little**

COO, Rayne Technology Solutions

"The product and team at Timus Networks is top-notch. We evaluated a number of other SASE/ZTNA solutions and vendors, but none are as comprehensive, fast, or easy to deploy as Timus."

**Ian Miller**

Engineering Manager, Brightworks Group
